UNM-Los Alamos Announces 2014 Summer Semester IT Internships

For the 2014 summer semester, UNM Los Alamos is able to offer, through funding from an NSF grant, internships for students enrolled in the new IT degree program. Internships for Summer 2014 include opportunities with Los Alamos National Lab and the UNM-LA campus IT department.

Internships offer excellent opportunities to apply classroom knowledge within a professional work environment and gain job skills while completing a degree. Most internship programs provide opportunities for meaningful work experiences while incorporating learning and training activities. Tasks and assignments will vary with each position. Students can expect to work up to 40 hours a week during the summer internship programs. Most internships offer some compensation, but exact amounts will vary with each position.

Requirements for the IT Program Internships for Summer 2014

- Enrollment in the new UNM-Los Alamos IT degree program by the end of the semester preceding the start of the internship;
- GPA of 3.0 or higher;
- 12 credit hours of course work completed per academic semester (not required for the summer semester);
- Participation in the internship application and assessment process

How to Apply

Students interested in applying for an internship for the Summer 2014 semester will need to complete an application packet. The application packet includes a current copy of your resume, a copy of unofficial transcripts, and a letter of intent describing why you would like to participate in the internship and what you hope to achieve in it. Resumes should include a list of relevant skills and course work. If you wish to apply for more than one internship, you must submit a separate packet for each, with separate letters of intent. A student may only accept one internship per academic year.

You will be contacted when your application is received. For more information, contact Eva Artschwager, NSF Grant Program Coordinator, at eartschw@unm.edu.

For assistance with resume building and letters of intent, contact Grace Willerton, Program Coordinator for the Accelerate Program at gwillert@unm.edu.
